West Somerset's Covid-19 infection rate is currently one of the highest in the county

Please help us to stop the spread of the virus in West Somerset

Don't take the chance – If you are feeling unwell, however mild - isolate and get a test, close contacts and household members must also isolate while awaiting the test result. You are putting yourself and other people at risk.

Coronavirus affects people differently – you might have mild symptoms, but others can become seriously unwell from the virus – think of loved ones and be vigilant.
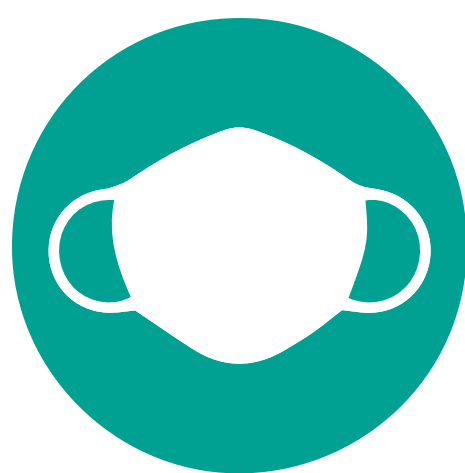

Socialise safely - If you are mixing with others, in work or out and about, remember to stick to the guidance to keep each other safe.

We have identified a number of households where the infection has spread – think about how you can keep your family safe at home.
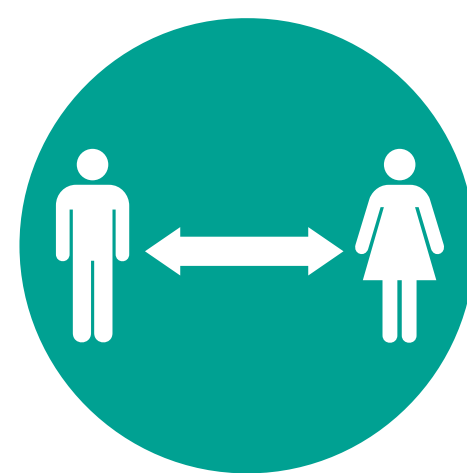

Treat everyone as if they have the virus – some people have the virus without any symptoms at all so they don't know they have it. Please act responsibly and remember: **wash your hands, cover your face, make space.**

HANDS   FACE   SPACE

Coronavirus testing is available in the community or through home testing kits that can be posted to you.
